

Vanquish™ deposit control

Specially formulated to treat the pink deposits that grow on pool walls and in plumbing, **Vanquish™** deposit control treats pink, white and clear deposits in any swimming pool, including those sanitized with biguanide systems.

Features:

- Rids pools of unwanted deposits
 - Clears cloudy water fast
- Compatible with all types of pools
- Allows swimming shortly after application

Applications:

To Treat Existing Pink Deposits:

Brush affected areas prior to application. Apply 16 oz. per 10,000 gallons as close to the affected areas as possible. For severe accumulations, a double dose can be applied. Allow filter to run overnight, then vacuum.

For Chlorine or Bromine Sanitized Pools:

Wait 4 hours, then add 1 gallon of liquid chlorine or 1 lb. of dry chlorine directly to the pool - not the skimmer. Allow filter to run overnight, then vacuum.

For Biguanide-Sanitized Pools:

Wait 4 hours, then add 1 gallon of liquid chlorine or 1 lb. of dry chlorine directly to the skimmer. Allow filter to run overnight, then vacuum.

Sizes:

32 oz.

Tips:

After applying **Vanquish™** deposit control, pool water may appear greenish in color while the product is working. This is normal. The water will clear in approximately 72 hours. Please also refer to actual product label for complete directions and precautionary statements.

Compatible With:

Chlorine, bromine, ozone, salt water pools, and biguanide sanitizers.

Advantage:

Pink deposits are not algae deposits and cannot be destroyed by traditional algaecides. The **Vanquish™** deposit control formula gets rid of pink deposits quickly.
